Computing and Information Technology

(Computer Competency) Requirement

All students in associate degree programs must demonstrate competence in computing and information technology (a computer competency requirement). Anne Arundel Community College defines a student who is competent in computing and information technology as one who can: (1) demonstrate a working knowledge of computer hardware and an appropriate operating environment to generate, store, retrieve, transfer and manipulate data; and (2) use the computer as a tool to solve problems and produce information appropriate to coursework.

A student may satisfy this requirement in one of the following ways: (1) complete a course or sequence of courses from the list of approved computer competency courses (see below); or (2) transfer in an equivalent course from another institution; or (3) test out of an approved course by passing a CLEP exam or departmental exam. Regardless of how the computer competency requirement is met, students must complete the number of credits required by their degree program. Consult an Academic Advisor, as needed, to ensure proper progress toward degree completion and to discuss computer technology, computer competency and other degree program required courses.

Approved Competency Courses

Completing one of the following approved courses or sequences of courses satisfies the computing and information technology competency requirement. (Students who completed an approved course or sequence of courses during the fall 1994 term or any subsequent term have met the computing and information technology requirement provided the required competency elements were included in the course when it was taken.)

Diversity Requirement

We live in a society and world characterized by diversity, and Anne Arundel Community College believes that the study of diversity is an essential part of contemporary education.

Diversity courses share common characteristics.

They focus on one or more of the elements of diversity: race, ethnicity, gender, disability, class, sexual orientation, age, and culture.

They look at how ideas about diversity are shaped by culture and affect the way people think and live; they link diversity to larger questions of power and privilege; and they help students develop the knowledge and understanding needed to participate effectively in our diverse global, national, and local communities. While the college encourages all students to complete a diversity course, each student pursuing an associate degree must fulfill the college's diversity requirement in one of the following ways: (1) Successfully complete one course from the list below; (2) Successfully complete one program diversity sequence from the list below; or (3) Transfer credit awarded for an equivalent course successfully completed at another accredited institution of higher education in accordance with the college transfer credit policy.
